

## Online Education Hand Hygiene e-learning module Advanced Reporting Features

safer healthcare  
*now!*

Are you running an internal hand hygiene campaign?  
Do you want to collect data on your organization's hand hygiene education practices?

If so, the advanced reporting features of the Online Education Hand Hygiene e-learning module is for you.

### Overview

The advanced reporting features of the "Hand Hygiene Module" are a great way to analyze how your staff are participating in the program. These reports can help you:

- Recognize and acknowledge your staff's completion of the educational module;
- Identify skills gaps or compliance issues within your organization; and
- Measure and report your progress towards Accreditation Canada's ROP specific to providing hand hygiene education.

After signing up for the advance reporting features, organizations are linked to a private, secure website where their employees take the hand hygiene education module. Organizations can then have access to their customized usage reports quickly and efficiently (see below for a sample report).

For more information on the advanced reporting features or to enroll in module reporting, please contact Shelley Payne via email at [handhygiene@discoverycampus.com](mailto:handhygiene@discoverycampus.com) or at 1-416-688-2191.
